**British Antarctic Survey Medical Unit (BASMU)
Medical Information Form for Polar Service Application**

These guidance notes introduce the medical requirements for Polar service and serve as the first level of the medical screening process. It is essential that you read the guidance notes below and complete the information and declaration at the end. Please then submit the completed form to your BAS HR contact.

Many medical conditions can be safely supported in the Polar sphere, but declaring all known medical issues is important so that we can assess your risk and ensure that you are as safe as possible. We supply limited medications for a limited range of medical issues that you may develop. If you are on regular medications, you will need your own supply for the entire time you deploy.

Developing a medical emergency while working in the polar regions carries with it high personal risk due to limited medical capability in that environment. Getting a patient to high level medical care often takes many days (sometimes weeks) and can be much longer than you expect. There is usually limited capability for winter medical evacuations, with significant operational and personal impact and sometimes risk for rescuers.

It is essential that you have read and checked that you do not have the conditions listed. If you do, ensure that you contact us using the details above before continuing with your application.

Please consider your own FITNESS TO DEPLOY. Speak with BAS if you are unsure.

Do you have the physical ability to do the job?

Do you have the physical / psychological attributes to live in the Polar environment?

Do you have the physical ability to help / rescue others?

You should be aware that BASMU will undertake a detailed medical and dental screening to exclude preventable causes of evacuation.

FAILURE TO DISCLOSE A MEDICAL PROBLEM DURING SCREENING MAY PUT YOUR LIFE AND THAT OF OTHERS AT RISK.

BASMU staff will always be happy to discuss any medical condition with you, with the aim of getting you cleared for Polar service. Certain conditions will preclude Polar service, but this is uncommon. There are many conditions that can be safely managed or well-controlled in your home environment. However, some may not be as stable or may carry higher risk in remote polar environments. This is why it is important that all conditions, even historic and well controlled, should be declared- even if you are completely well at the moment.

BASMU Medical 1 Form

Should you be selected by BAS or by your employer for a Polar trip, further screening will be required. This will include a medical questionnaire and an examination by a doctor. Medical problems can often be resolved by early and open discussion, and BASMU will work to understand risks and mitigate where possible, sometimes with further investigation or specialist review.

In the event of any query, one of the BASMU staff may contact you directly and we will ask for permission to approach your doctor (GP) for clarification.

A guide to current or historic conditions that may cause concern (non-exhaustive)

Conditions that preclude service Decisions depend on many different factors and will be made on an individual basis.	Conditions which <i>may</i> preclude service. These will be assessed on an individual basis and in relation to the capacity to undertake activity/work in the anticipated environment.
Cardiac & Circulation problems Angina & Heart Attacks Leaky Heart valves & Rheumatic Fever Previous Heart Surgery Uncontrolled High Blood Pressure Heart Rhythm Abnormalities Heart Failure Arterial Disease	Treated abnormal rhythms Severe varicose veins Previous Frostbite Severe Reynaud’s disease Previous leg thrombosis Previous clot on the lung
Respiratory (chest) problems Recurrent pneumothorax Cold induced or severe asthma Chronic Bronchitis or emphysema Active Tuberculosis Sleep Apnoea/ use CPAP	Single episode of pneumothorax History of moderate Asthma
Gastrointestinal problems Active stomach / duodenal ulcer Liver Disease Pancreatitis Untreated Hernia Inflammatory bowel disease	Previous exploratory abdominal surgery Severe piles History of stomach/duodenal ulcers

BASMU Medical 1 Form

Immunisations

FOR EVERYONE

When completing the online BASMU 3 form please give dates of the last time you had these vaccinations:

GENERAL ADVICE The following websites offer very good information for travellers in respect of immunisations and ways to avoid diseases:

www.nhs.uk/conditions/travel-immunisation

www.fitfortravel.nhs.uk or www.hpa.org.uk/infections

www.nathnac.org/travel

Complete any initial courses before you travel.

All of the vaccines are available from your GP or travel clinic.

Please update BASMU on your immunisation status.

Yellow Fever is no longer required when travelling by RAF flights from Brize Norton to the Falklands.

For those returning home directly by air or BAS ship, there are no specific requirements.

Those who plan to travel /return home via South America, Africa, Asia, India or the Middle East may need additional vaccination. Advice changes frequently and it is important that up to date information is obtained from the latest Department of Health advice to travellers or from the websites mentioned above. This is the individuals responsibility.

Malaria is probably the most prevalent and dangerous tropical disease that you may encounter. Advice is country/region specific so please check www.cdc.gov for the latest advice regarding appropriate prophylaxis. Ensure you have enough medication for the duration of your trip as the station/ship doctor does not carry stocks of these medications. In the UK you can obtain this via private prescription or purchase from a pharmacist.

Consultation with your doctor about your travel plans should take place 2 to 3 months before you travel.

Please remember before you leave UK that some of the vaccinations, such as rabies, require more than one dose at set intervals. Be aware there may not be time to fully immunise you before your departure.

Initial courses of travel vaccinations should be completed prior to leaving UK. If your cover lapses while you are in the Antarctic and you need a booster, as an independent traveller you would be able to call in to health centres/clinics located at major towns/cities en route to the areas in which you plan to travel.

The individual must have received at least one covid vaccine in there lifetime.

BASMU Medical 1 Form

ALL fields MUST be completed. Please complete details below for **any** upcoming deployment and return completed form to basrecruitment@bas.ac.uk.

Please complete name as on passport.

Surname			
Middle name(s)			
First name			
Date of birth			
Address			
Email address (that you are happy to use for medical information)			
Mobile number			
Occupation and destination			
Duration	<table border="1"> <tr> <td>Summer</td> <td>Winter</td> </tr> </table>	Summer	Winter
Summer	Winter		

Annual requirements:

You must complete a self-assessment and dental every year you are due to deploy.

BASMU 3 (self-assessment)- will be forwarded to you via email.

BASMU 7 or 8 - Dental forms will be forwarded to you via email.

BASMU 4 - Medical completion frequency below. A BASMU 4 may also be requested outside of these periods if there are any changes in your health condition or at the discretion of BASMU. This will be emailed for you to share with the person completing the medical.

Up to 35 years	Every 5 years
35 years to 50 years	Every 3 years
50 and above	Annually including an annual ECG

I declare that I have read the conditions listed above and (tick relevant box):

I have none of the conditions	
I have one or more conditions, and I have contacted BASMU and been cleared to continue my application.
